The eG Monitor for Red Hat Enterprise Virtualization

For cloud computing to be successful, performance assurance is paramount. Users of cloud-based services expect the same performance experience as if these services were hosted in their corporate network.

eG Innovations enables success of your cloud initiatives by delivering performance assurance, user satisfaction, and rapid ROI. eG Enterprise is the first solution that automates and accelerates cloud performance management, providing total performance visibility across all tiers and all layers of the distributed cloud ecosystem. The eG Enterprise suite delivers performance management for organizations moving to the cloud from three

important perspectives: the deployment perspective, the cloud consumer perspective, and the cloud provider perspective. [More>>](#)

Award Winning Cloud Performance Solution

EMA ranks eG Innovations as a cloud performance management leader based on its product architecture, deep integration, ease of administration, deployment and cost advantages. Specifically, eG Innovations has been recognized as the management software vendor with the "Best Private Cloud Coverage" for its superior private cloud management capabilities and very strong support for virtualized environments.

eG Innovations also earned EMA's "Value Leader" distinction among 11 management software vendors providing a multi-component APM solution.

This award is based on multiple functional capabilities, including:

- **Comprehensive Virtualization Coverage:** eG Innovations supports monitoring, diagnosis and reporting for [VMware vSphere](#), [Citrix XenServer](#), [Microsoft Hyper-V](#), [Microsoft Virtual Server 2005](#), [Solaris LDOMs](#), [Solaris Containers](#), [AIX LPARs](#), [Red Hat Enterprise Virtualization \(RHEV\)](#) and [Oracle VirtualBox](#).
- **Patented Virtualization / Cloud-aware Correlation & Root Cause Diagnosis:** Automatically correlates across metrics from different tiers to identify and fix issues before users call. eG Innovations' correlation supports the dynamic inter-dependencies, such as [VMware vMotions](#), that come with private clouds and provides deep visibility where traditional tools have limitations.
- **Universal Agent Technology:** Contributes to cost and administration efficiency and delivers maximum deployment flexibility. A single agent is capable of monitoring over [150 applications](#), [10 different operating systems](#), and [9 different virtualization platforms](#).
- **"In-N-Out" Virtual Infrastructure Monitoring:** Delivers both depth and breadth of insight into virtual application performance, a critical criterion for rapid and accurate diagnosis of performance problems.

"We are truly impressed with eG Innovations cloud performance management solution. eG beats out most of the competition in terms of coverage for diverse virtual server environments as well as for its distinctive 'top down' and 'bottom up' real-time analytics.

The eG Enterprise Suite includes multiple features that one would expect from more expensive solutions; their comprehensive support for virtual environments positions eG Innovations as a leader in terms of monitoring private cloud and public infrastructure as a service environments."

- Julie Craig, Research Director, EMA

It is the only solution that provides both an outside view of a VM indicating the hypervisor's physical resources used by a VM and an inside view of the VM indicating which application(s) and user(s) of the VM are causing the resource usage.
